

# *Invest in an asset for your future*

Announcing a major  
new reference work for  
the actuarial profession

The **Encyclopedia  
of Actuarial Science**  
is the definitive resource  
in the field...

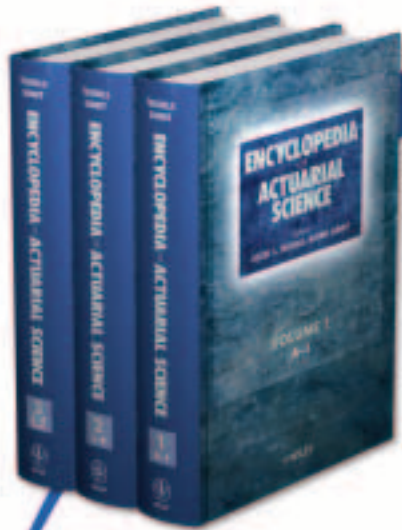

- **Comprehensive  
reference**
- **Compiled by leading  
experts in the field**
- **Over 450 articles**
- **Over 250 contributors**
- **3 volumes**

**Take advantage of the special  
introductory offer...**

DETAILS INSIDE

 **WILEY**

# ENCYCLOPEDIA OF ACTUARIAL SCIENCE

## Key features:

- **Invaluable**

Reliable, up-to-date information in the complex fields of insurance, banking and investment management, transportation, utilities and all commercial activities that require financial risk modeling. A must have for researchers and students in the field of actuarial and insurance science.

- **Informative**

In 3 easily searched volumes, the Encyclopedia aids the reader in applying a greater understanding of the actuarial profession and achieving more informed decision making in the workplace.

- **Experience**

Contains over 450 articles provided by over 250 leading international editors and authors from the extensive field of actuarial science, industry and academic research.

- **Cross-disciplinary nature**

Detailed coverage of key concepts from business, economics, insurance mathematics, finance, risk theory, probability theory and statistics, plus the inclusion of supporting topics such as demography, genetics, operations research and informatics.

**This reference is a timely and comprehensive body of knowledge that will serve as an essential reference for the actuarial profession and all related business and financial activities, as well as researchers and students in actuarial science and related areas.**

## Making financial sense

# Editorial Board

## Editors-in-Chief

### Jozef L. Teugels

University Centre for Statistics, Katholieke Universiteit Leuven, Belgium

### Bjørn Sundt

Vital Forsikring ASA, Norway

## Section Editors

### Claims Distributions

#### Gordon E. Willmot

Department of Statistics and Actuarial Science  
University of Waterloo, Ontario, Canada

### Collective Risk Theory

#### Elias S. W. Shiu

Statistics and Actuarial Sciences, University of Iowa, USA

### Direct Nonlife Insurance

#### Gary G. Venter

Guy Carpenter Instat, New York, USA

#### Greg Taylor

Taylor Fry Consulting Actuaries, Sydney, Australia

### Economics

#### Michel Denuit

Institut des Sciences Actuarielles & Institut de Statistique  
Université Catholique de Louvain, Belgium

#### Marco Scarsini

Dipartimento di Statistica e Matematica Applicata  
Università di Torino, Italy

### Finance

#### Andrew Cairns

Actuarial Mathematics and Statistics, Heriot-Watt University,  
Edinburgh, Scotland

### Life, Pension and Health Insurance

#### Angus S. Macdonald

Actuarial Mathematics and Statistics, Heriot-Watt University,  
Edinburgh, Scotland

### Organizations, Journals and History

#### Jean Lemaire

Insurance and Risk Management Department, Wharton School,  
University of Pennsylvania, Philadelphia, USA

### Premium Calculation, Nonlife

#### Shaun Wang

SCOR Reinsurance Company, Itasca, Illinois, USA

### Probability Theory

#### Søren Asmussen

Department of Theoretical Statistics, Aarhus University, Denmark

### Reinsurance

#### Maria de Lourdes Centeno

Instituto Superior de Economia e Gestão, Universidade Técnica de Lisboa,  
Portugal

### Reserving, Nonlife

#### Richard Verrall

Department of Actuarial Science and Statistics, City University, London, UK

### Statistics

#### Josef G. Steinebach

Mathematisches Institut, Universität zu Köln,  
Germany

**Purchase this  
reference NOW at  
the special  
Introductory offer**

**0-470-84676-3 Aug 2004  
3 Volumes approx 1800pp**

**Introductory Price Only  
£705 €1057.50 \$1305.00**

(valid until 31/10/04)  
thereafter £895

€1342.50 \$1570.00

# CONTENTS

Articles in the Encyclopedia appear alphabetically by title across the three volumes.

Here they are classified under the 12 section headings used in compiling the work.

## Claims Distribution

- Aggregate loss modeling
- Approximating the aggregate claims distribution
- Beta function
- Censored distributions
- Comonotonicity
- Compound distributions
- Compound Poisson frequency models
- Continuous parametric distributions
- Convolutions of distributions
- Copulas
- Cramér-Lundberg asymptotics
- Cramér-Lundberg condition and estimate
- De Pril recursions and approximations
- Dependent risks
- Discrete multivariate distributions
- Discrete parametric distributions
- Discretization of distributions
- Empirical distribution
- Esscher transform
- Extreme value distributions
- Failure rate
- Gamma function
- Generalized discrete distributions
- Heckman-Meyers algorithm
- Individual risk model
- Inflation impact on aggregate claims
- Integrated tail distribution
- Lundberg approximations, generalized
- Mean residual lifetime
- Mixed Poisson distributions
- Mixture of distributions
- Mixtures of exponential distributions
- Phase-type distributions
- Reliability classifications
- Scale distribution
- Stop-loss premium
- Sundt and Jewell class of distributions
- Sundt's classes of distributions
- Thinned distributions
- Truncated distributions
- Zero-modified frequency distributions

## Collective Risk Theory

- Adjustment coefficient
- Ammeter process
- Beekman's convolution formula
- Claim number processes
- Claim size processes
- Collective risk models
- Collective risk theory
- Compound process
- Dividends
- Early warning systems
- Lundberg inequality for ruin probability
- Operational time
- Risk management: an interdisciplinary framework
- Risk minimization
- Risk process
- Ruin theory
- Seasonality
- Severity of ruin
- Surplus process
- Time of ruin

## Direct Nonlife Insurance

- Accident insurance
- Accounting
- ALAE
- Annual statements
- Anti-selection, nonlife
- Aquaculture insurance
- Automobile insurance, commercial
- Automobile insurance, private
- Aviation insurance
- Bundling
- Burglary insurance
- Captives
- Claim frequency
- Closed claim
- Coinsurance
- Combined ratio
- Commercial multi-peril insurance
- Consequential damage
- Coverage
- Crop insurance
- Deductible
- Demutualization
- Duration
- Earthquake insurance
- Employer's liability insurance
- Employment practices liability insurance
- Expense ratios
- Fidelity and surety
- Financial insurance
- Fire insurance
- Flood risk
- Homeowners insurance
- Insurance company
- Insurance forms
- Insurance regulation and supervision
- Lapses
- Leverage
- Liability insurance
- Lloyd's
- Long-tail business
- Loss ratio

- Loss-of-profits insurance
- Marine insurance
- Mass tort liabilities
- Mortgage insurance in the United States
- Mutuals
- Natural hazards
- Nonlife insurance
- P & I clubs
- Policy
- Premium
- Property insurance — personal
- Replacement value
- Risk classification — pricing aspects
- Risk statistics
- Self-insurance
- Sickness insurance
- Total loss
- Travel insurance
- Unemployment insurance
- Workers' compensation insurance

## Economics

- Adverse selection
- Audit
- Background risk
- Borch's theorem
- Cooperative game theory
- Deregulation of commercial insurance
- Equilibrium theory
- Financial economics
- Fraud in insurance
- Free riding
- Frontier between public and private insurance schemes
- Incomplete markets
- Insolvency
- Insurability
- Lotteries
- Market equilibrium
- Moral hazard
- Noncooperative game theory
- Nonexpected utility theory
- Oligopoly in insurance markets
- Optimal risk sharing
- Pareto optimality
- Pooling equilibria
- Risk aversion
- Risk utility ranking
- Solvency
- Underwriting cycle
- Utility theory

## Finance

- Affine models of the term structure of interest rates
- Arbitrage
- Asset management
- Asset-liability modeling
- Binomial model
- Black-Scholes model
- Capital allocation for P&C insurers: A survey of methods
- Catastrophe derivatives
- Collective investment (pooling)
- Complete markets

Credit scoring  
 Derivative pricing, numerical methods  
 Derivative securities  
 DFA — Dynamic financial analysis  
 Efficient markets hypothesis  
 Finance  
 Financial engineering  
 Financial intermediaries: the relationship between their economic functions and actuarial risks  
 Financial markets  
 Fixed-income security  
 Foreign exchange risk in insurance  
 Hedging and risk management  
 Index-linked security  
 Inflation: a case study  
 Interest rate risk and immunization  
 Interest-rate modeling  
 Market models  
 Matching  
 Portfolio theory  
 Risk based capital allocation  
 Risk measures  
 Stochastic investment models  
 Transaction costs  
 Utility maximization  
 Value at risk  
 Volatility  
 Wilkie investment model

## Life, Pension and Health Insurance

Actuarial control cycle  
 Annuities  
 Asset shares  
 Assets in pension funds  
 Capital in life assurance  
 Commutation functions  
 Decrement analysis  
 Demography  
 Disability insurance  
 Disability insurance, numerical methods  
 Dynamic financial modeling of an insurance enterprise  
 Estate  
 Euler-Maclaurin expansion and Woolhouse's formula  
 Genetics and insurance  
 Group life insurance  
 Hattendorf's theorem  
 Health insurance  
 Heterogeneity in life insurance  
 International actuarial notation  
 Lexis diagram  
 Lidstone's theorem  
 Life insurance  
 Life insurance mathematics  
 Life table  
 Long-term care insurance  
 Maturity guarantees working party  
 Model office

Mortality laws  
 Options and guarantees in life insurance  
 Participating business  
 Pension fund mathematics  
 Pensions  
 Pensions, individual  
 Pensions: finance, risk and accounting  
 Present values and accumulations  
 Profit testing  
 Risk-based capital requirements  
 Social Security  
 Surplus in life and pension insurance  
 Surrenders and alterations  
 Technical bases in life insurance  
 Unit-linked business  
 Valuation of life insurance liabilities  
 Waring's theorem

## Organizations, Journals and History

Actuarial Institute of the Republic of China  
 Actuarial Research Clearing House (ARCH)  
 Actuarial Society of Ghana  
 Actuarial Society of Hong Kong  
 Actuary  
 AFIR  
 Aktuarvereinigung Österreichs (Austrian Actuarial Association)  
 American Academy of Actuaries  
 American Risk and Insurance Association (ARIA)  
 American Society of Pension Actuaries  
 Ammeter, Hans (1912—1986)  
 Argentina, actuarial associations  
 Association of Actuaries and Financial Analysts  
 Association Royale des Actuairees Belges  
 ASTIN  
 Bailey, Arthur L. (1905—1954)  
 Beard, Robert Eric (1911—1983)  
 Bernoulli family  
 Borch, Karl Henrik (1919—1986)  
 Brazilian Institute of Actuaries (IBA)  
 British Actuarial Journal  
 Canadian Institute of Actuaries  
 Casualty Actuarial Society  
 Ceska Spolecnost Aktuaru (Czech Society of Actuaries)  
 China, development of actuarial science  
 Col·legi d'Actuaris de Catalunya  
 Conference of Consulting Actuaries  
 Cramér, Harald

(1893—1985)  
 Croatian Actuarial Association  
 Cyprus Association of Actuaries (CAA)  
 De Finetti, Bruno (1906—1985)  
 De Moivre, Abraham (1667—1754)  
 de Witt, Johan (1625—1672)  
 Den Danske Aktuarforening  
 Den Norske Aktuarforening (The Norwegian Actuarial Society)  
 Deutsche Aktuarvereinigung e. V. (DAV)  
 Dodson, James (1710—1757)  
 Early mortality tables  
 Estonian Actuarial Society  
 Faculty of Actuaries  
 Franckx, Edouard (1907—1988)  
 Gompertz, Benjamin (1779—1865)  
 Graunt, John (1620—1674)

 Ukrainian Actuarial Society  
 Wright, Elizur (1804—1885)

## Premium Calculation, Nonlife

Bailey-Simon method  
 Bonus-malus systems  
 Catastrophe models and Catastrophe loads  
 Credibility theory  
 Experience rating  
 Financial pricing of insurance  
 Ordering of risks  
 Premium principles  
 Ratemaking  
 Retrospective premium  
 Risk classification, practical aspects

## Probability Theory

Brownian motion  
 Central limit theorem  
 Change of measure  
 Combinatorics  
 Convexity  
 Counting processes  
 Coupling  
 Diffusion approximations  
 Diffusion processes  
 Dirichlet processes  
 Extreme value theory  
 Filtrations  
 Fuzzy set theory  
 Gaussian processes  
 Hidden Markov models  
 Itô calculus  
 Large deviations  
 Lévy processes

Long range dependence  
Markov chains and Markov processes  
Markov chains Monte Carlo methods  
Markov models in actuarial science  
Martingales  
Operations research  
Ornstein-Uhlenbeck process  
Phase method  
Point processes  
Poisson processes  
Probability theory  
Queueing theory  
Random number generation and Quasi-Monte Carlo  
Random variable  
Random walk  
Rare event  
Regenerative processes  
Renewal theory  
Shot-noise processes  
Simulation of stochastic processes  
Stability  
Stationary processes  
Stochastic control theory  
Stochastic optimization  
Stochastic orderings  
Stochastic processes  
Subexponential distributions  
Transforms  
Under- and overdispersion

## Reinsurance

Alternative risk transfer  
Burning cost  
Catastrophe excess of loss  
Excess-of-loss reinsurance  
Exposure rating  
Financial reinsurance  
Largest claims and ECOMOR reinsurance  
Life reinsurance  
Nonproportional reinsurance  
Pareto rating  
Pooling in insurance  
Pooling of employee benefits  
Proportional reinsurance  
Quota share reinsurance  
Reinsurance  
Reinsurance — terms, conditions, and methods of placing  
Reinsurance forms  
Reinsurance pricing  
Reinsurance supervision  
Reinsurance, functions and values  
Reinsurance, reserving  
Retention and reinsurance programmes  
Stop loss reinsurance

Surplus treaty  
Working covers

## Reserving, Nonlife

Bayesian claims reserving  
Bornhuetter-Fergusson method  
Chain-ladder method  
Claims reserving using credibility methods  
Fluctuation reserves  
Generalized linear models  
Kalman filter, reserving methods  
Nonlife reserves — continuous time micro models  
Reserving in nonlife insurance  
Separation method

## Statistics

Bayesian statistics  
Censoring  
Cohort  
Competing risks  
Decision theory  
Estimation  
Extremes  
Frailty  
Graduation  
Graphical methods  
Information criteria  
Kalman filter  
Life table data, combining  
Logistic regression model  
Maximum likelihood  
Multivariate statistics  
Neural networks  
Nonparametric statistics  
Numerical algorithms  
Occurrence/exposure rate  
Outlier detection  
Parameter and model uncertainty  
Prediction  
Regression models for data analysis  
Reliability analysis  
Resampling  
Robustness  
Screening methods  
Simulation methods for stochastic differential equations  
Simulation of risk processes  
Splines  
Statistical terminology  
Stochastic simulation  
Survival analysis  
Time series
